Education

Georgia Institute of Technology

Bachelor of Science in Computer Science (Artificial Intelligence & Computer Graphics)

August 2022 – May 2026

GPA: 3.85 / 4.00

Experience

Software Engineering Intern, The Home Depot

May 2025 - July 2025

- Developed REST full-stack triage assistance tool for SREs to reduce incident resolution time and revenue impact during outages using React, Python, FastAPI, OAuth 2.0, Glean, Google Cloud Store, and BigQuery
- Built modules for system health monitoring, deployment validation, audit log analysis, dataset schema fetching, unified resource hub, OpenTelemetry / API endpoint mapping, LLM chatbot, and dynamic SQL query generation
- Automated 40% of triage flow, reducing manual toil time, GCP costs, and improving accessibility for new SREs

Machine Learning Intern, Hi-Rez Studios

June 2024 - January 2025

- Designed generative AI pipelines to enhance UI / FX / concept art toolsets, reducing asset creation time by 75%
- Developed PyTorch / Unreal scripts to automate dataset curation + AI image segmentation into artist-friendly PSD files; trained 20+ Stable Diffusion image models on 3D characters, UI icons, particle FX, and IP art styles

Undergraduate Researcher, Georgia Tech Expressive Machinery Lab

January 2024 - May 2024

- Developer for interactive embodied ML agent in world's first human / AI dance performance + MoCap installation
- Built Unity tools with C# / NoSQL for motion data capture, visualization, and MongoDB database management
- Designed UI and procedural algorithms to map movement theories to avatar behavior with Azure Kinect SDK

VR Software Developer, Georgia Tech Office of Information Technology

May 2023 - May 2024

- Prototyped use cases of real-time 3D engines for XR research initiatives / promotional multiplayer environments
- Created 25+ Unity / Unreal / NVIDIA Omniverse demos with C# / C++ / Python / OpenUSD pipelines for virtual film production, photogrammetry digital twins, generative AI assets / HDRIs, exhibitions, CAD pre-visualizations

Projects

Historical Text Analysis Pipeline, Georgia Tech Vertically Integrated Project

- Developed NLP tools to analyze spelling variation in Early Modern texts with Python, PyTorch, and HPC clusters
- Built data parsers, classifiers, clustering algorithms, and statistical tests to model linguistic shifts over time
- Created Matplotlib visualizations for word entropy, standardization trends, LLM analysis, historical correlations

VectorViz, AI ATL Hackathon | 1st Place - Business Innovation Track; Honorable Mention - Best Use of GCP

- Built Flask / Svelte tool for interactive node-based visualization / AI-driven exploration of GCP vector databases
- Streamlined large-scale data discovery via BERT for semantic search, OpenAI API for contextual LLM querying

Buzz Studios Film Archive + Tools, Buzz Studios Filmmaking Club

- Developer for short film streaming service and admin tools using React, Firebase, Cloud Storage, and Python
- Built LLM-based VTT caption translator, waiver automator, location scout Discord bot, and archive editor GUIs
- VFX / technical artist for 20+ shots, 30+ 3D models in Blender, 20+ 2D assets in Figma, Photoshop, Invoke AI

UpRoot Music Discovery

- Created a full-stack influence-based artist discovery site via React / PostgreSQL, deployed with CI/CD pipeline

VR State Analysis, VR @ GT / Big Data Big Impact @ GT

- Built C# Unity / PyTorch app predicting heart rate (± 10 bpm) from VR headset motion data via DSP / ML models
- Developer for VR CAPTCHA using Neural Networks to classify bot gestures made via motion diffusion models

Technical Skills

Languages: (Proficient): C#, Python, Java, HTML/CSS/JS, NoSQL (Familiar): SQL, TypeScript, C++, GLSL, Dart

Libraries & Frameworks: PyTorch, TensorFlow, React, FastAPI, Node, Svelte, jQuery, OpenCV, OpenGL, DirectX

Tools & Platforms: MongoDB, GCP, BigQuery, Unity, Unreal Engine, NVIDIA Omniverse, Android Studio, Arduino

Design Software: Figma, Photoshop, Blender, Fusion, DaVinci Resolve, Stable Diffusion, ComfyUI, Invoke AI
