Education

Georgia Institute of Technology

Bachelor of Science in Computer Science (Artificial Intelligence & Computer Graphics)

August 2022 – May 2026

GPA: 3.85 / 4.00

Experience

Software Engineering Intern, The Home Depot

May 2025 - July 2025

- Developed full-stack triage assistance tool for SREs to reduce incident resolution time and revenue impact during outages using React, Python, FastAPI, OAuth, Glean, Google Cloud Store, and BigQuery
- Built modules for system health monitoring, deployment validation, audit log analysis, dataset schema fetching, centralized resource display, URL / API endpoint mapping, Glean AI chatbot, and dynamic SQL query generation
- Automated 40% of triage flow, reducing manual toil time, GCP costs, and improving accessibility for new SREs

Machine Learning Intern, Hi-Rez Studios

June 2024 - January 2025

- Designed generative AI pipelines to enhance UI / FX / concept art toolsets, reducing asset creation time by 75%
- Developed PyTorch / Unreal scripts to automate dataset curation + AI image segmentation into artist-friendly PSD files; trained 20+ Stable Diffusion image models on 3D characters, UI icons, particle FX, and IP art styles

Undergraduate Researcher, Georgia Tech Expressive Machinery Lab

January 2024 - May 2024

- Developer for interactive embodied ML agent in world's first human / AI dance performance + MoCap installation
- Built Unity tools with C# / NoSQL for motion data capture, visualization, and MongoDB database management
- Designed UI and procedural algorithms to map movement theories to avatar behavior with Azure Kinect SDK

VR Software Developer, Georgia Tech Office of Information Technology

May 2023 - May 2024

- Prototyped use cases of 3D engines for multi-department XR research initiatives and multiplayer environments
- Created 25+ Unity / NVIDIA Omniverse projects with C# / Python / OpenUSD pipelines for interactive virtual film production, photogrammetry digital twins, art exhibitions, architecture pre-visualizations, and lab simulations

Projects

Historical Text Analysis Pipeline, Georgia Tech Vertically Integrated Project

- Developed NLP tools to analyze spelling variation in Early Modern texts with Python, PyTorch, and HPC clusters
- Built data parsers, classifiers, clustering algorithms, and statistical tests to model linguistic shifts over time
- Created data visualizations for word entropy, standardization trends, LLM analysis, and historical correlations

Buzz Studios Film Archive + Tools, Buzz Studios Filmmaking Club

- Developer for short film streaming service and admin tools using React, Firebase, Cloud Storage, and Python
- Built LLM-based VTT caption translator, waiver automator, location scout Discord bot, and archive editor GUIs
- Generalist VFX / technical artist for 20+ shots in Blender; designed 2D assets in Figma, Photoshop, Invoke AI

VectorViz, AI ATL Hackathon | 1st Place - BCG X Business Innovation Track

- Built Svelte web app for interactive nodal visualization / AI chat / exploration of GCP-based vector databases
- Developed frontend with implementation of BERT for semantic search, OpenAI API for contextual LLM querying

Tron: Disc Wars XR, ImmerseGT XR Hackathon | 1st Place - Virtual Adventures Track

- Created C# Unity-based colocation multiplayer VR / AR / MR game; managed MVP goals for 36 hour timeline
- Implemented Meta's Interaction SDK / Passthrough API, PUN SDK for networking, and custom DirectX shaders

VR Heart-Rate Predictor, VR @ GT / Big Data Big Impact @ GT

- Built C# / Unity / PyTorch app predicting heart rate from VR headset micro-movements using motion sensor data

Technical Skills

Languages: (Proficient): C#, Python, Java, HTML/CSS/JS, NoSQL (Familiar): Dart, C++, SQL, TypeScript, GLSL

Software: MongoDB, GCP, BigQuery, Unity, Unreal Engine, NVIDIA Omniverse, Android Studio, Arduino, Flutter

Libraries & Frameworks: PyTorch, React.js, FastAPI, Node.js, Svelte, Three.js, OpenCV, OpenGL

Design Tools: Figma, Adobe Photoshop, Blender, DaVinci Resolve, Stable Diffusion, ComfyUI, Invoke AI
